

AP Physics 2010-2011 Final Project  
Peer Evaluation

Your Name: \_\_\_\_\_

Your Period: \_\_\_\_\_

Project: \_\_\_\_\_

**Control of Variables**

External factors limited to insignificant amounts	External variables limited but they still affect results	External variables large, but their effects explained	Variables not well controlled	No evidence of control of variables
---	--	---	-------------------------------	-------------------------------------

**Quality of data**

Exhaustive measurements of all variables	Good measurements but could use more variables measured	Missing important measurements	Clearly not enough measurements	No data demonstrated
--	---	--------------------------------	---------------------------------	----------------------

**Relations between independent and dependent variables are:**

Fully explained with precise relationships	well explained and estimated	given general trends	only discussed	No data analysis
--	------------------------------	----------------------	----------------	------------------

**Error Analysis**

All sources discussed	Most sources discussed	Some discussion	Very little discussion	No error analysis
-----------------------	------------------------	-----------------	------------------------	-------------------

**Difficulty of Experiment Comparable to:**

professionals	college students	average SMHS student	low end of SMHS students	Junior High
---------------	------------------	----------------------	--------------------------	-------------

**Overall Quality of Work Comparable to:**

professionals	college students	average SMHS student	low end of SMHS students	Junior High
---------------	------------------	----------------------	--------------------------	-------------
