Naı	me Class Date				
Cl	hapter 12 DNA and RNA				
Se	ction 12-1 DNA (pages 287-294)				
rela	s section tells about the experiments that helped scientists discover the tionship between genes and DNA. It also describes the chemical structure the DNA molecule.				
Gr	iffith and Transformation (pages 287–289)				
1. V	What did Frederick Griffith want to learn about bacteria?				
- 2. [The strain of bacteria that caused pneumonia grew into colonies				
	on culture plates; harmless bacteria produced colonies with edges.				
	Circle the letter of each sentence that is true about Griffith's experiment.				
â	a. Mice injected with bacteria from smooth colonies died.				
1	b. Mice injected with bacteria from rough colonies died.				
(. Mice injected with heat-killed bacteria from smooth colonies died.				
(d. Mice injected with a mixture of bacteria from heat-killed smooth colonies and live rough colonies died.				
Į. V	What result from Griffith's experiment suggested that the cause of pneumonia was not a				
_	chemical poison released by the disease-causing bacteria?				
5. V	What is transformation?				
5. Ī	What hypothesis did Griffith form from the results of his experiments?				
7.]	rery and DNA (page 289) Is the following sentence true or false? Avery and his colleagues thought that the molecule required in transformation might also be the molecule of the gene.				

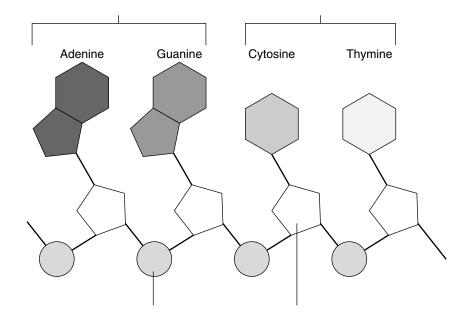

8.	Briefly describe how Avery and his group determined which molecule was most				
	important for transformation?				

Name		Class	Date		
9.	Transformation did no	coccur when	was destroyed.		
10.	What was the conclusion	on from Avery's experime	nts?		
Th	e Hershey-Chase E	xperiment (pages 289–2	90)		
11.	What is a bacteriophag	e?			
12.	Circle the letter of each part that makes up a bacteriophage.				
	a. lipid coat	c. carbohydrate o	ore		
	b. protein coat	d. DNA core			
13.	What happens when a	bacteriophage infects a ba	acterial cell?		
14.	How would Hershey and Chase learn whether genes were made of protein or DNA?				
15.	Circle the letter of the molecule for which phosphorus-32 (³² P) is used as a radioactive marker.				
	a. protein b. lip	id c. DNA d	. carbohydrate		
16.	Is the following sentence true or false? If ³⁵ S was found in the bacteria, it would mean				
	that the viruses' DNA had been injected into the bacteria.				
17.	What results did Hershey and Chase observe?				
18.	Hershey and Chase con	ncluded that the genetic n	naterial of the bacteriophage was		
	·				
Th	e Components and	Structure of DNA	pages 291–294)		
	-	ings that genes were know	- -		
1,0		ings that genes were late			
	b				
	c				
20.	Adenine, guanine, cyto	sine, and thymine are for	r kinds of bases

in DNA.

21. Identify the components of a nucleotide in the diagram below. Label the bases as purines or pyrimidines.

- **22.** Is the following sentence true or false? Adenine and guanine are larger molecules than cytosine and thymine because they have two rings in their structure. _____
- 23. What forms the backbone of a DNA chain? _____
- **24.** Is the following sentence true or false? The nucleotides must be joined together in a specific order. _____
- **25.** According to Chargaff's rules, the percentages of _______ are equal to thymine and the percentages of ______ are equal to guanine in the DNA molecule.
- **26.** Rosalind Franklin's work with X-ray diffraction showed that the DNA molecule is shaped like a(an) ______ and contains _____ strands.
- **27.** How did Francis Crick and James Watson try to understand the structure of DNA?
- 28. How did Watson and Crick describe the structure of DNA?
- **29.** Is the following sentence true or false? According to the principle of base pairing, hydrogen bonds could form only between adenine and cytosine.
