*Find the upper and lower bounds of each function. Graph the function.*

List possible rational zeros based on bounds and graph.

1. $f(x) = 6x^3 + 13x^2 - 13x - 20$

2. $f(x) = 3x^4 + x^3 - 7x^2 + x - 10$

3. $f(x) = 2x^4 - 7x^3 - 11x^2 + 10x + 6$

4. Find all zeros of $f(x) = 3x^5 + 4x^4 - 2x^3 + 2x^2 - 5x - 2$.

Solve over the complex numbers:

5. $54x^4 - 2x = 0$

6. $9x^4 - 14x^2 - 8 = 0$
