

# Postulates and Theorems Relating Points, Lines, and Planes

For use after Section 1-5

Classify each statement as true or false.

1. Two points can lie in each of two different lines. \_\_\_\_\_
2. Three noncollinear points can lie in each of two different planes. \_\_\_\_\_
3. Three collinear points lie in only one plane. \_\_\_\_\_
4. Two intersecting lines are contained in exactly one plane. \_\_\_\_\_
5. If two lines intersect, then they intersect in exactly one point. \_\_\_\_\_
6. If two planes intersect, then their intersection is a line. \_\_\_\_\_

Name each of the following.

7. The plane that contains  $\overleftrightarrow{BF}$  and  $\overleftrightarrow{FG}$  \_\_\_\_\_
8. The plane that intersects  $ADHE$  in  $\overleftrightarrow{AE}$  \_\_\_\_\_
9. The plane that doesn't intersect  $ABCD$  \_\_\_\_\_
10. The intersection of planes  $ADHE$ ,  $DCGH$ , and  $ABCD$  is \_\_\_\_\_
11. Two lines that don't intersect plane  $EFGH$  \_\_\_\_\_

Exs. 7-18

Write the postulate or theorem that justifies the statement about the diagram. (Write out in full - do not give the postulate or theorem number!)

12. Plane  $BCGF$  is the only plane containing  $\overleftrightarrow{FG}$  and point  $C$ . \_\_\_\_\_  
\_\_\_\_\_
13. Lines  $\overleftrightarrow{BF}$  and  $\overleftrightarrow{FG}$  intersect in only one point. \_\_\_\_\_  
\_\_\_\_\_
14.  $\overleftrightarrow{FH}$  is contained in the plane  $FGHE$ . \_\_\_\_\_  
\_\_\_\_\_
15. Planes  $ADHE$  and  $EFGH$  intersect in only one line. \_\_\_\_\_  
\_\_\_\_\_
