Matrix P shows the prices of the flags and bears and matrix N shows the number sold over a three-day period. Use matrix multiplication to determine on which day the greater amount of money was taken in from the sale of the items and the dollar amount taken in on that day.</p> <p style="text-align: center;"> <table style="display: inline-table; vertical-align: middle;"> <tr> <td style="text-align: center;">prices (in dollars)</td> <td style="text-align: center;">number sold</td> </tr> <tr> <td style="text-align: center;">flag bear</td> <td style="text-align: center;">Mon. Write a system of 3 equations using 3 variables and use Cramer's Rule to solve the system. In a triangle, the sum of the first angle and twice the second angle equals the third angle. Four times the second angle is 15 degrees more than the third angle. Find the measures of all three angles.</p>	prices (in dollars)	number sold	flag bear	Mon. Tues. Extra Practice Problems

Perform the indicated operations.

$$1. \quad 3\left(\begin{bmatrix} 1 & 0 \\ 2 & 1 \end{bmatrix} + \begin{bmatrix} 4 & 2 \\ 0 & 3 \end{bmatrix}\right) - \begin{bmatrix} 1 & 1 \\ -3 & 2 \end{bmatrix}$$
